### Important Risks

There are risks associated with investing in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. These risks may be more pronounced with respect to investments in emerging markets. Investment in gold and gold related investments present certain risks, and returns on gold related investments have traditionally been more volatile than investments in broader equity or debt markets. The principal risk of investing in value stocks is that the price of the security may not approach its anticipated value or may decline in price. All investments involve the risk of loss.

**MSCI World Index** is a widely followed, unmanaged group of stocks from 23 international markets and is not available for purchase. The index provides total returns in US dollars with net dividends reinvested.

**Standard & Poor's 500 Index** is a widely recognized unmanaged index including a representative sample of 500 leading companies in leading sectors of the US economy and is not available for purchase. Although the Standard & Poor's 500 Index focuses on the large-cap segment of the market, with approximately 80% coverage of US equities, it is also considered a proxy for the total market.

**MSCI EAFE Index** is an unmanaged total return index, reported in US dollars, based on share prices and reinvested net dividends of approximately 1,100 companies from 21 developed market countries. One cannot invest directly in an index.

**Consumer Price Index (CPI)** an index of the variation in prices paid by typical consumers for retail goods and other items

Indices are unmanaged, one can not invest directly in an index.
