Risks

All investments involve the risk of loss of principal.

There are risks associated with investing in securities of foreign countries, such as erratic market conditions, economic and political instability and fluctuations in currency exchange rates. These risks may be more pronounced with respect to investments in emerging markets.

A principal risk of investing in value stocks is that the price of the security may not approach its anticipated value or may decline in value. "Value" investments, as a category, or entire industries or sectors associated with such investments, may lose favor with investors as compared to those that are more "growth" oriented.

Investment in gold and gold-related investments present certain risks, and returns on gold related investments have traditionally been more volatile than investments in broader equity or debt markets.

Active share is the percentage of a portfolio's holdings that deviate from its benchmark index. **Price-to-earnings ratio (P/E ratio)** compares a company's stock price to its earnings per share.
